

James Finnie

Product Manager — AI Agents, Fintech & Growth

Toronto, ON — remote (US/Canada) · james_finnie@icloud.com · +1 416 666 6331 · james-finnie.com · linkedin.com/in/james-finnie · github.com/JPFinnie · Canadian PR

PROFILE

Product manager who ships working software, not decks. Seven years in regulated fintech — payments, trading, wealth — now building the AI stack product teams run on inside one of Canada’s largest banks: an agentic product-development platform, a knowledge base agents read as ground truth, and ML personalization across the full client base. Nights and weekends I ship deployed agents people actually use. Strong opinions about AI products, and the habit of measuring my way out of the wrong ones.

EXPERIENCE

Senior Product Manager, AI & Personalization CIBC Investor’s Edge · Toronto Jul 2025 – Present

- Built an internal Product & Engineering platform where PMs converse with the bank’s AI to go from question to artifact: it spins up lightweight working prototypes, pulls context from the corporate second brain and agent skills files, connects to Figma, and drafts PR-FAQs and BRDs — collapsing product-to-engineering handoffs across a large bank.
- Mined years of historical engineering estimates against the BRDs that produced them, so the same platform returns evidence-grounded effort estimates for new proposals before the first planning meeting.
- Built that second brain on Google’s Open Knowledge Format (OKF, the standardized Karpathy LLM-wiki pattern): a markdown knowledge base indexing ~4,700 source documents into ~7,600 agent-readable notes with ~28,000 cross-references across SharePoint and Jira.
- Lead ML personalization for CIBC’s direct-investing platform: propensity models score every new client (options, ETFs, FHSA/RRSP) into Braze and Contentstack journeys, with closed-loop retraining lifting accuracy and conversion.
- Replaced BRD-heavy delivery with one- and six-pagers and prototype-first decisions — Claude-built working prototypes pressure-test pricing and packaging concepts in days rather than quarters.

Manager, IoT & Intelligent Systems (Product Owner) Trudell Medical International · Toronto Oct 2023 – Jul 2025

- Owned the roadmap for AeroLiv, TMI’s first Software-as-a-Medical-Device platform and its connected IoMT respiratory ecosystem; negotiated and ran a \$5M multi-year development contract, delivering compliant with FDA, Health Canada and CE Mark.
- Pulled the launch forward a quarter through ruthless scope prioritization and QA automation, leading a distributed team of twelve across North America and India.

Associate Product Manager, Global Trading Platforms StoneX (NASDAQ: SNEX) · London May 2022 – Jun 2023

- Co-owned City Index and FOREX.com web/mobile platforms — roughly half of StoneX Retail’s global OTC CFD and spread-bet volume; drove a quality initiative that cut iOS/Android crash rates 99.58%, lifting retention and trade completion.
- Shipped UX and packaging improvements to SMART Signals, the in-house ML trading-signals product.

Product Analyst, Onboarding Equals Money (LON: EQLS) · London Jun 2021 – May 2022

- Rebuilt B2B/B2C onboarding with automated KYC/KYB verification, lifting new-account conversion 35% and cutting approval from weeks to days.

SHIPPED — NIGHTS & WEEKENDS

- **FinanceHermes** · finance-hermes.vercel.app — live financial-research agent with a hand-built harness: streaming tool-call loop over live web search, visible reasoning traces, server-side citation enforcement and a two-tier freemium gate; zero-dependency serverless deploy, demoed live to rooms of investment advisors.
- **Personal OKF knowledge base** — the same LLM-wiki pattern I run at work, run at home: a cross-linked markdown knowledge graph that Claude Code and other agents read as ground truth.
- **The Six Cut** · six-cut.vercel.app — Next.js discovery product ranking Toronto’s independent butchers with a proprietary scoring methodology.

EDUCATION

MA, International Studies & Diplomacy (Merit) · SOAS, University of London · 2021 | **MA (SocSci), Business & Management** (2:1) · University of Glasgow · 2020 · Accenture-sponsored Open Banking (PSD2) research

TOOLKIT

AI & Agents	Claude API, Claude Code & agent skills, agent harnesses (tool loops, SSE streaming, evals), RAG / OKF knowledge bases, open models (Hermes 4, Ollama, Mistral)
Growth & Data	Propensity modeling, A/B testing, funnel optimization, Braze, Contentstack, Amplitude, FullStory, Google Analytics
Delivery	Prototype-first, PR-FAQs & six-pagers, Jira, Confluence, Figma, Vercel, Next.js, Scrum
